

Ensuring Excellence.

Global Proficiency is an accredited provider of Reference Materials. Our Reference Materials are produced in compliance with ISO 17034 – *General requirements for the competence of reference material producers.*

Certified Reference Materials

Our Certified Reference Materials are metrologically traceable to internationally published methods and SI units. The uncertainties that accompany the certified values are robust and constantly monitored throughout the shelf life of the material. CRM's can be used for calibration, method validation, methodology verification, and less frequent instrument checks needed for quality control. The characterisation process considers the contribution to the uncertainty of the assigned value from multiple sources. Currently we have a whole milk powder available as a certified reference material.

Reference Materials

Reference Materials can be used for calibration checks, method validation, methodology verification, and more frequent instrument checks needed for quality control. You will find our range of RM's cost effective and reliable.

Our current range of reference materials includes;

- **Organic – Foodstuffs:** Dairy Products & Infant formula
- **Environmental – Soils and Sludges:** Soils & Acid Sulphate Soils
- **Environmental – Plant Material:** Plants
