

1 Professionalism, Integrity and Competence

Global Proficiency Ltd is committed to conducting its business with professionalism, integrity and competence. To that end, employees shall act in a way that will uphold the reputation of Global Proficiency and shall be honest and trustworthy in the discharge of their duties. No employee shall be authorised or required to conduct work which they are not qualified or competent to do.

2 Accuracy and Impartiality

Confidence in the accuracy and impartiality of statements, reports and information prepared by Global Proficiency Ltd is paramount. We ensure that the information provided to our customers is fair and objective and based on sound practices to ensure consistency across all programmes and products. Opinions given by employees shall be honest, objective and not designed to please any particular customer, person or interest.

3 Confidentiality

Global Proficiency Ltd respects the confidentiality of information supplied by customers and the privacy of individuals.

All data submitted to Global Proficiency becomes the property of Global Proficiency Ltd and may be used for additional reporting, trending and/or reference material characterisation. Information relating to the results from, or performance of, individual laboratories will not be disclosed to any party other than the laboratory concerned, unless with the agreement of that laboratory. Where disclosure to a third party is obligatory (e.g. ASPAC or MPI via the Recognised Laboratory Programme) this will be made known to prospective participants at enrolment.

Summary information relating to the general performance of laboratories in any proficiency round or over specific periods of time may be disclosed to participants (for example in newsletters or the Annual Report). This summary information will not identify specific results or performance of individual laboratories. In specific programmes, information relating to laboratory performance is routinely made available to a third party by as per contractual agreements – this is made known to participants at the time of enrolment in the programme.

Global Proficiency staff will take all reasonable steps to ensure that all sources of information relating to results or performance – including electronic data storage, receipt and transmission - are secure, and that operational procedures are implemented in accordance with these policies. All programmes containing customer sensitive information are password protected and access is restricted to Global Proficiency Ltd Staff.

Our premises are locked when unattended and the alarm is continuously monitored by a security agency.

4 Disclosure of Assigned Values

To ensure participants cannot gain advantage from early disclosure, comparisons of laboratory performance are only undertaken once all data is submitted and the round has been closed off for assessment.

5 Re-Issue of Reports

Reports issued at the conclusion of a round are usually the final report. However, there are exceptions:

- Where the report issued at the close of a round is in error due to a fault on the part of Global Proficiency, the error will be corrected:
 - A revised report will be issued to the affected laboratory. This report will have the same status as the original report (e.g. Report 1 will be Report 1), and will be clearly identified to indicate which version is the valid report for that round.
 - Communication accompanying these reports (e.g. email) will advise the source of the error and explain the status of the revised report.
 - If consensus values or proficiency assessments are significantly affected, the Programme Leader may issue revised reports to all participating laboratories.
- For the Soil & Plant programme (ASPAC), an Interim Report is issued at the conclusion of the round. The final report for each round is issued as an Annual Report after the conclusion of the annual series of proficiency rounds. Changes to grouping of test data by method, or exclusion of data for related reasons may occur between Interim Reports and Annual Report.
- Where test data is known to be in error (for example through transcription, incorrect units or other fault of the laboratory), a laboratory may request an Amended Report indicating the performance assessment that would have applied had the error not occurred. Reasonable evidence will be required that an error has occurred. This report will be clearly identified as an Amended Report.
- Where results have been submitted after the Results Due date (or later time decided by the Programme Leader) a Late Report may be issued. This report will be clearly identified as a Late Report.
- Where a laboratory has requested a blind re-test sample/s (which may not be the same sample/s), a Retest Report may be issued in relation to the retest result. This report will be clearly identified as a Retest Report.

6 Gross Errors

Results which are clearly gross errors (e.g. wrong units or decimal point in wrong place etc.) are usually included in the data set but should normally be excluded by outlier selection procedures. If grossly erroneous results are not excluded by the outlier selection processes - and a consensus value is affected significantly - then the Programme Leader may exclude this data if there is reasonable evidence of error.

If results are clearly in error due to transposition errors (i.e. results are linked to the wrong sample number) and these results are not excluded by outlier selection processes, then all such results may be excluded from the data sets.

7 Subcontracting

Various aspects of the scheme may be subcontracted from time to time. When subcontracting occurs, this information shall be made known to participants (for example in a Proficiency Guide). Global Proficiency retains ultimate responsibility for subcontracted work, and any such work shall only be conducted by a competent subcontractor.

8 Conflicts of Interest

Global Proficiency Ltd avoids as far as possible circumstances which may compromise the independent exercise of professional judgement. Any conflicting interest which may compromise this independence shall be disclosed by employees to their manager. Avoidance of conflicts of interest may be achieved by disclosure to customers or other potentially affected parties, by re-assignment of work within the company, or by not engaging in work where conflicts of interest or perceptions of such conflicts cannot be managed by other means.

9 Collusion and/or Falsification of Results

It is the responsibility of all participants to avoid any collusion or falsification of results to ensure the ongoing integrity of all Global Proficiency information and assessments.

If collusion or falsification between participating laboratories is suspected by any staff member, this matter will be discussed with their Manager. If there is reasonable evidence of such practices these concerns would be discussed with Senior Management of the laboratory concerned.

10 Complaints and Appeals

Whilst the aim of Global Proficiency is to provide the best service possible a clear system for complaints handling is very important and investigation is given high priority. Participants can contact Global Proficiency by phone, e-mail or letter giving precise information as to the nature of the complaint.

All complaints investigations are overseen and reviewed by the Quality Manager. The people involved will depend on the nature of the complaint and who received the complaint, and should normally involve any staff members directly involved in the original work. Results of investigations, conclusions drawn, and actions taken are documented as part of Global Proficiency's Quality System and are subject to external audit. The complainant will be advised of the investigation and actions taken.
